

CNS involved in a large scale IP Re-Addressing Project

10 January, 2005

CNS today announced that it had successfully completed its contract to compliment in-house IT expertise by providing consultancy services for a Multi National Market Research Organisation during their large scale server farm deployment.

CNS were engaged to assist in the design, deployment and support of a high performance, highly resilient, secure application server farm supporting over 50,000 registered users.

In addition, CNS provided high level consultancy services for their Global IP Re-addressing Project covering over 270 sites worldwide.
