

DR facility project for CNS

16 April, 2007

CNS today announced that it is currently advising a leading UK Energy provider on appropriate Disaster Recovery Planning. This extensive project involves the design and deployment of an extensive DR network site capable of supporting 14,000 users.

This follows on from an earlier project that included the design and management of a resilient Cisco based network implementation over more than 70 UK sites consisting of over 2,000 Cisco network devices.
